

Labeling information

INCI name(s)

Hydrolyzed Keratin

Product properties

Appearance

The partial hydrolysate of the keratin from enzymatically degraded shear wool is a brownish-yellow solution with a slight inherent odour.

Example of use

Due to its composition, one can describe NUTRILAN® KERATIN W as a hair-identical protein hydrolysate. Compared to other proteins, the keratin has a high proportion of cystine. NUTRILAN® KERATIN W does not only show an affinity to hair; on skin it acts as a protective and care substance. NUTRILAN® KERATIN W has the best alcohol solubility out of all Cospha protein hydrolysates; it is therefore also suitable for aqueous/alcoholic formulations.
